

A modern and industry-leading mobile camera control and automation suite, and compatibility with Phase One IQ4-based medium format cameras – available now in Cascable 6.0, the photography app for iOS with support for over 200 WiFi-enabled cameras and hundreds more via USB

STOCKHOLM — June 17th, 2021

Cascable AB is happy to announce the release of **Cascable 6.0**, which brings with it a completely new and revamped remote control, optimised for all screen size combinations from the smallest iPhone to the largest iPad at any orientation. The new remote control concentrates on clarity and ease of use, bringing at-a-glance exposure settings and a greatly simplified and refined workflow.

Cascable 6.0 also brings the first steps in an innovative new collaboration with Danish camera manufacturer Phase One, bringing mobile remote control and image transfer to Phase One IQ4 based medium format cameras. For the first time, IQ4 users can control and automate their cameras from their iPhone or iPad wherever they are, and transfer 150 megapixel IIQ RAW images to their devices for preview and management.

Cascable is available to get started with for free from the iOS App Store. Cascable's Pro features come with a free trial when subscribing from \$29.99 per year, or can be accessed with a non-subscription \$59.99 purchase. Please visit <http://cascable.se> for more information on Cascable, including screenshots, photographs, and detailed user guides.

The Cascable family of products are developed by Cascable AB, a mobile development company founded in Stockholm, Sweden in 2015.
