

What's New In Cascable Studio 7.0?

The main changes in Cascable Studio version 7.0 include:

- **Runs Natively on macOS**

Cascable Studio runs natively on the Mac, with nearly all of the features of the iOS version and some features especially built for macOS! Owners of Cascable Studio 7 Pro will get the iOS and Mac versions of the app with a single license.

- **Support for Video Recording**

Record and manage videos, including automation support with video blocks for Cascable Studio's innovative Recipes feature.

- **Supercharged Remote Control**

New remote control features help creativity flow with additions including onion skinning, live LUT previews, negative scanning mode, and more. Cascable Studio also now supports iOS Picture in Picture, allowing you to keep the shots flowing even when you're working in other apps.

- **App Connections**

Connect with apps such as Photos, Retrobatch, and Capture One to effortlessly get your images where they need to be.

- **Improved Tethering Workflow**

Increased flexibility lets you get your images where they need to go even faster. Support for "true" tethering with Canon, Nikon and Sony cameras lets you shoot directly to your iOS device's storage, your Photos library, or even directly to an external SSD. Your images will be exactly where you want them to be without any manual management.
