Cascable Welcomes GoPro To The Family!

STOCKHOLM — October 16, 2025

Launching today, Cascable AB announces support for GoPro cameras in their app Cascable Studio, a photography workflow app for iPhone, iPad, and Mac. Cascable Studio 7.2 brings with it support for GoPro HERO Black cameras from the GoPro HERO 9 onwards. This adds to the existing support for Canon, Fujifilm, Nikon, Olympus, OM System, Panasonic, Phase One, and Sony cameras, bringing the total support to over 250 models.

Whether you're on the mountainside, in the water, or deep in a forest, Cascable Studio is ready to help photographers to shoot, automate, and back up files on the go – no matter how extreme the adventure!

Behind the scenes, Cascable Studio utilises the CascableCore SDK, which means GoPro support is also available to developers wanting to seamlessly integrate with the wide range of supported cameras.

CascableCore's benefit has always been that developers can lean on us to deal with the intricacies of camera compatibility while they focus on building a great app – and the addition of GoPro is no exception.

Whether it's managing USB, Bluetooth, and WiFi connections and switching between them, or implementing a high-performance, Metal-backed GPU pipeline for rendering the GoPro's high-framerate, high-quality live view stream, CascableCore does all of that work for you.

Cascable Studio is available to get started with for free from the App Store. Visit <http://cascable.se> for more information including screenshots, photographs, and detailed user guides.

More information about CascableCore can be found at <https://developer.cascable.se/>.

The Cascable family of professional photography products are developed by Cascable AB, a development company founded in Stockholm, Sweden in 2015. Our apps include Cascable Studio, Photo Scout & Cascable Pro Webcam, as well as the CascableCore SDK.
